

# Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales

**Marie Nevoux, C. Tréhin, R. Patin, Q. Queiros, F. Marchand, L. Lamireau, S. Gregory, J. Roussel & E. Rivot**  
INRAE, Ecosystem Dynamics and Sustainability Research Unit, France

4-6 October 2022 / International Year of the Salmon Synthesis Symposium / 'Salmon in a Changing Salmosphere' theme session

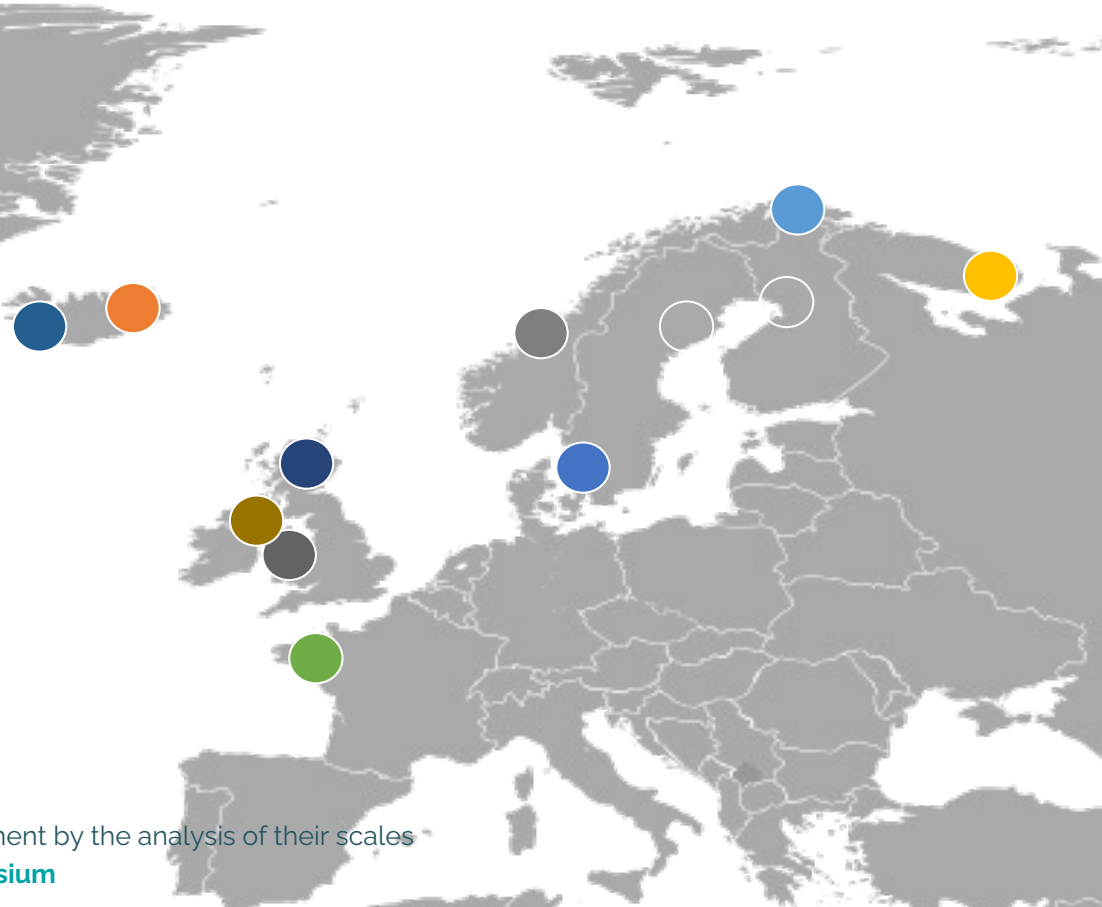

# 'Salmon in a Changing Salmosphere' theme session

Global decline in Atlantic salmon and global change

Synchrony in the decline of salmon abundance across multiple stocks

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales

Nevoux et al. / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

## ➤ 'Salmon in a Changing Salmosphere' theme session

Global decline in Atlantic salmon and global change

Synchrony in the decline of salmon abundance across multiple stocks  
Large scale changes in the ecosystem of the North Atlantic Ocean

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales  
Nevoux et al. / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

## 'Salmon in a Changing Salmosphere' theme session

Global decline in Atlantic salmon and global change

Synchrony in the decline of salmon abundance across multiple stocks

Large scale changes in the North Atlantic ecosystem

→ **How to link salmon decline and changes at sea?**

- Change in growth conditions?
- Consequences on population dynamics?

INRAE

Unravelling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their seas

Neveux et al. / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

## Understanding the marine phase of the salmon life cycle

Scales are archives of individual growth history

Retrospective analysis of salmon growth

Sélune, 2SW

1,5 mm

**INRAE**

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales

Névoux et al. / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

# ➤ Understanding the marine phase of the salmon lifecycle

Scales are archives of individual growth history

Retrospective analysis of salmon growth

INRAE

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales

Névoux et al. / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

# Understanding the marine phase of the salmon lifecycle

Scales are archives of individual growth history

Retrospective analysis of salmon growth

Sélune, 2SW

**INRAE**

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales  
Nevoux et al. / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

# Understanding the marine phase of the salmon lifecycle

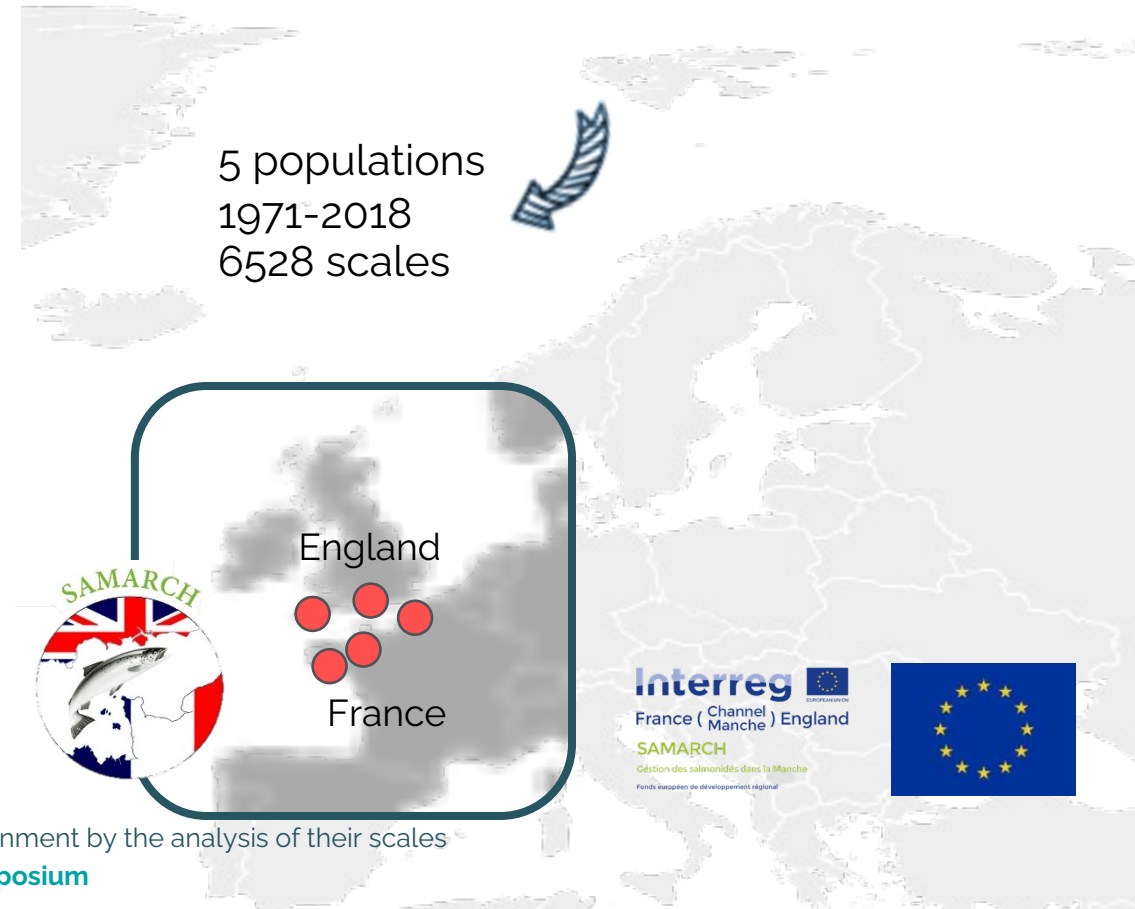

Scales are archives of individual growth history

Retrospective analysis of salmon growth

Sélune, 2SW

- Describe long-term change in marine growth
- Identify the spatial scale of changes
- Link growth to life history and population dynamics

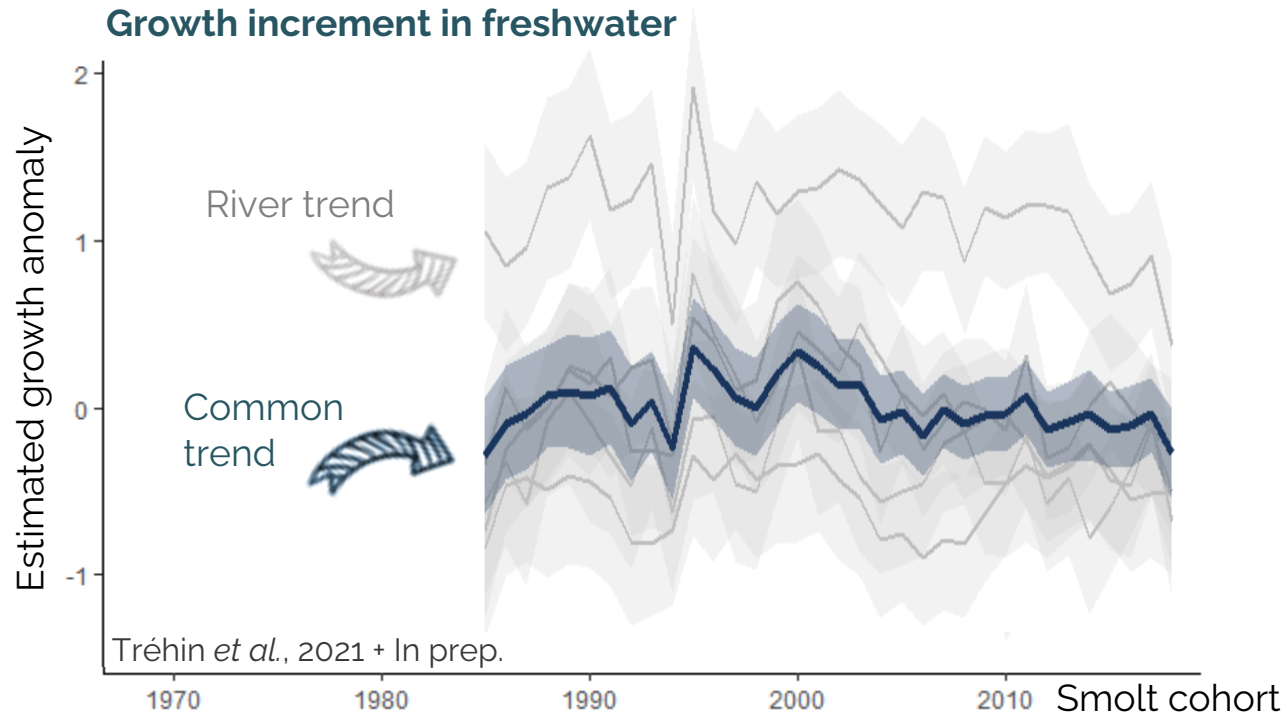

INRAE

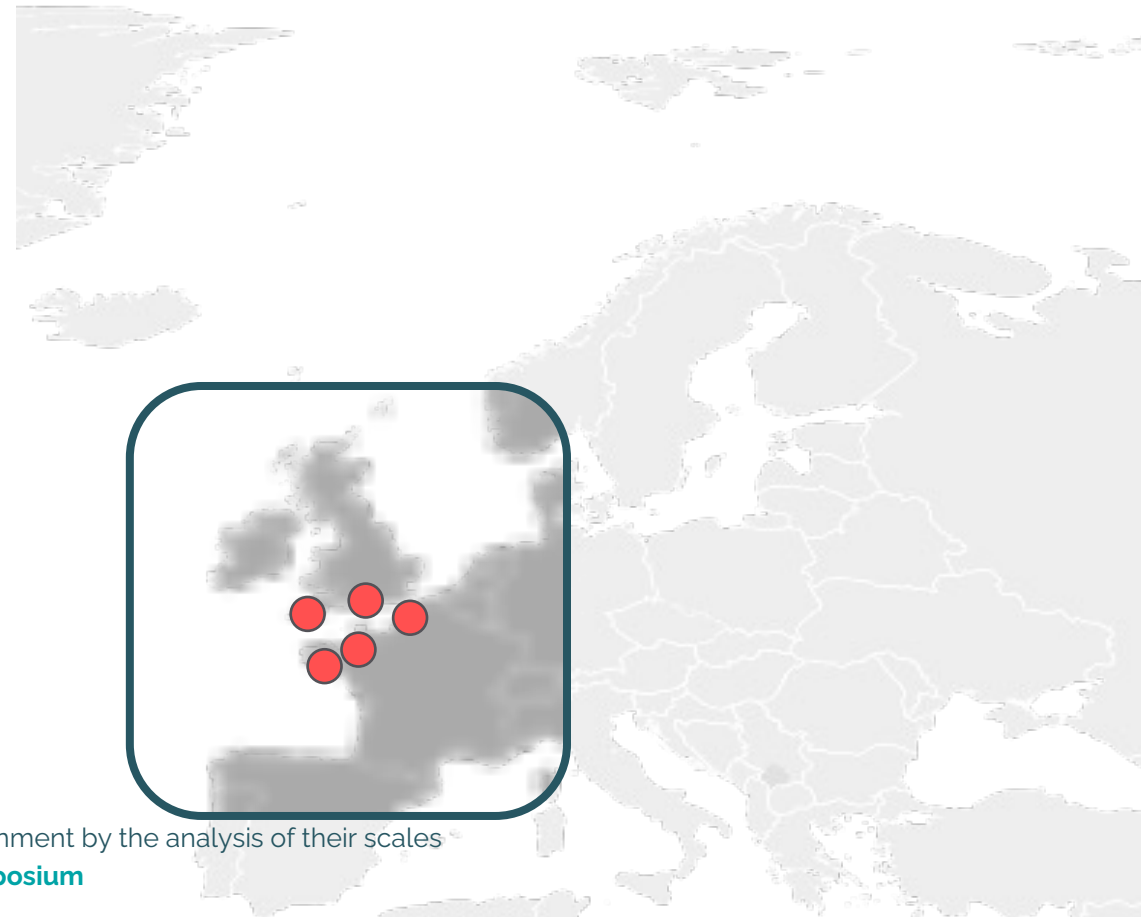

## Salmon growth in freshwater

Stable growth with population specific variability

No evidence of long term change in smolt size  
Freshwater growth is population-specific

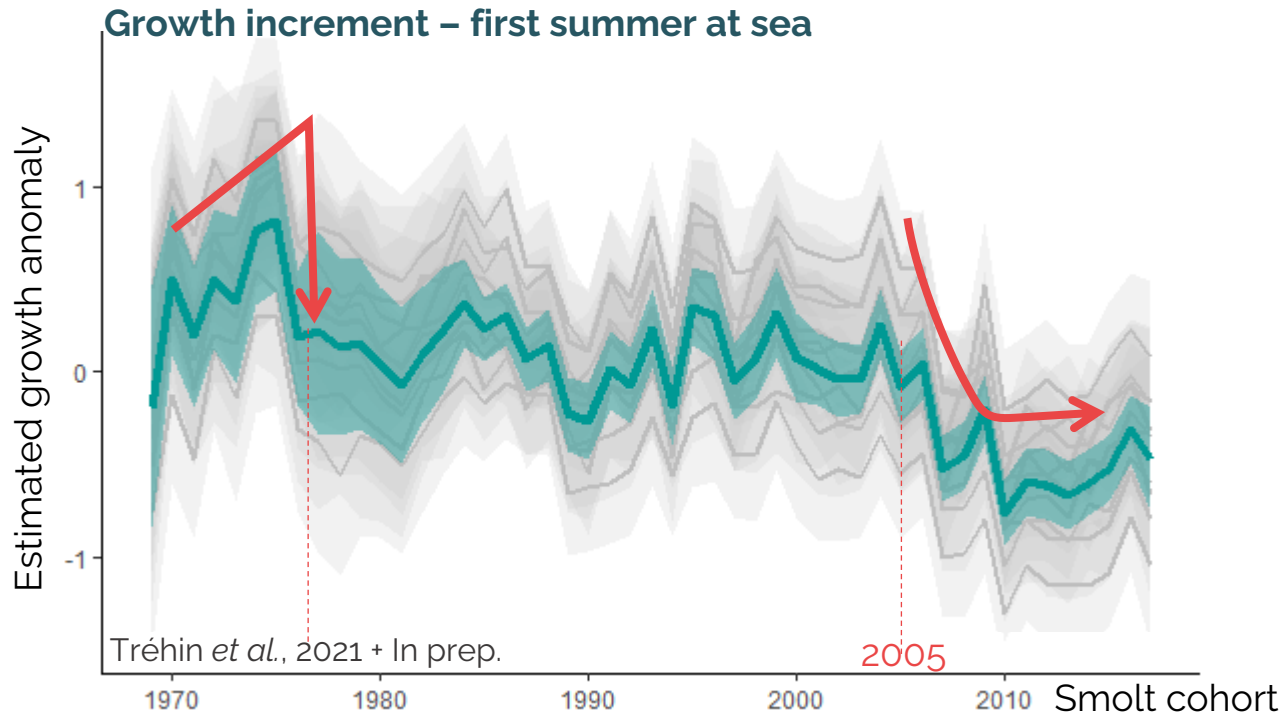

**INRAE**

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales

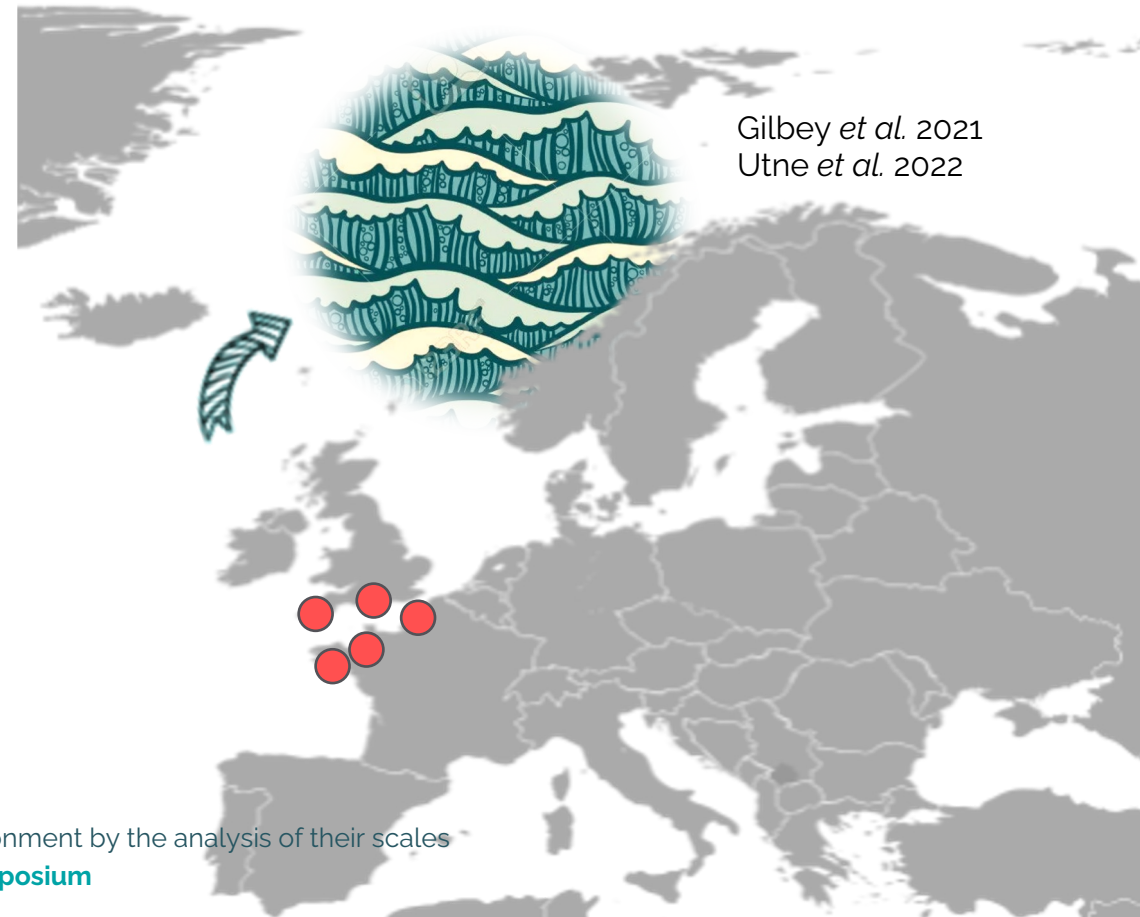

Nevoux *et al.* / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

# ➤ Decline in early marine growth

Spatial synchrony in growth pattern

Marine growth at record low since 2005  
Similar decline in summer growth in all 5 populations  
→ Early marine growth drives decline in salmon?

**INRAE**

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales  
Nevoux *et al.* / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

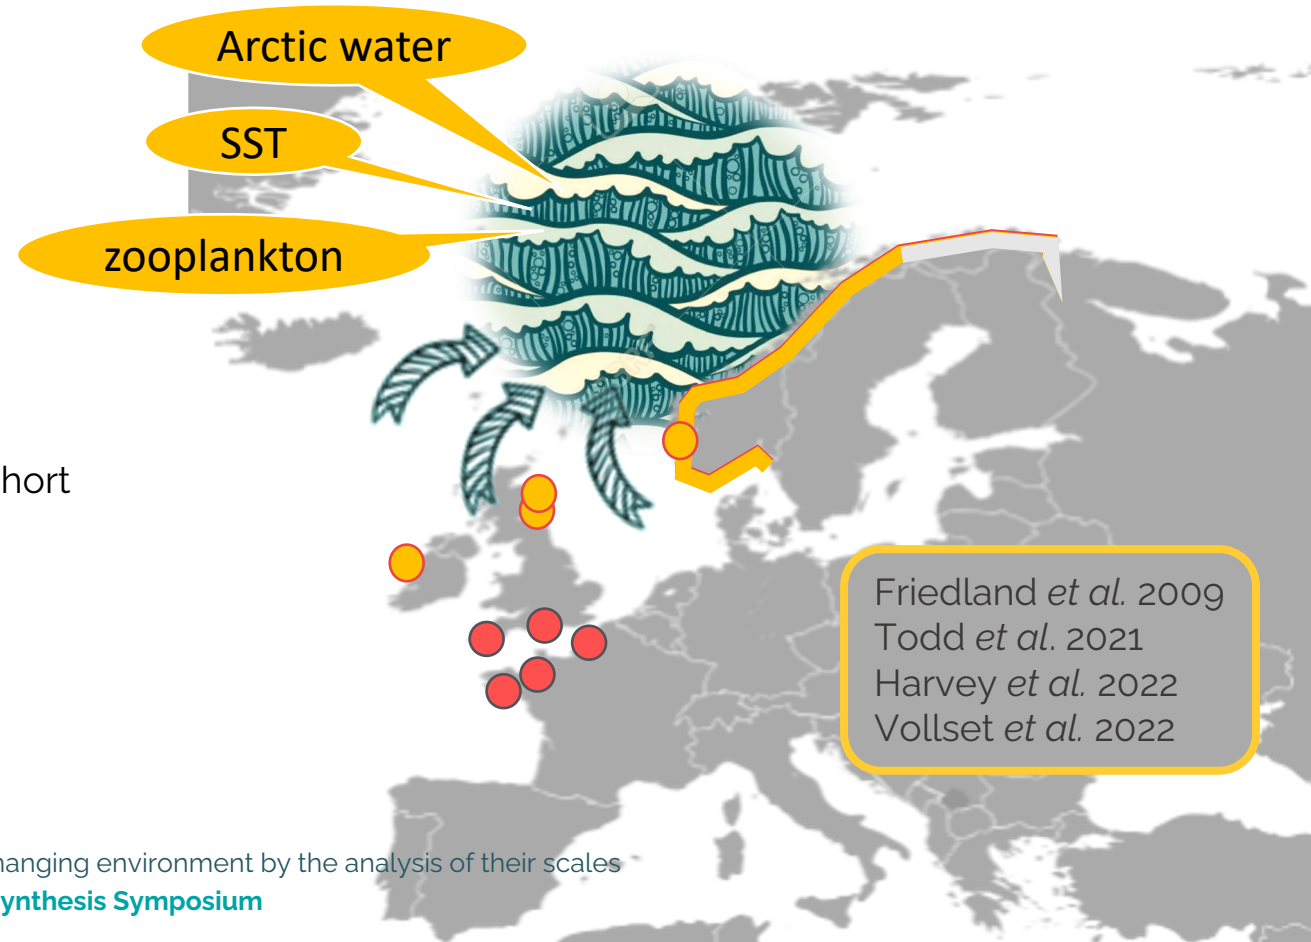

# Decline in early marine growth

Spatial synchrony in growth pattern

Marine growth at record low since 2005  
Similar decline in summer growth in all 5 populations  
→ Early marine growth drives decline in salmon?

Similar trends recorded across Southern Europe...  
... but not in North American populations (Barajas *et al.* 2021)  
→ Change in growth condition in the Norwegian sea

**INRAE**

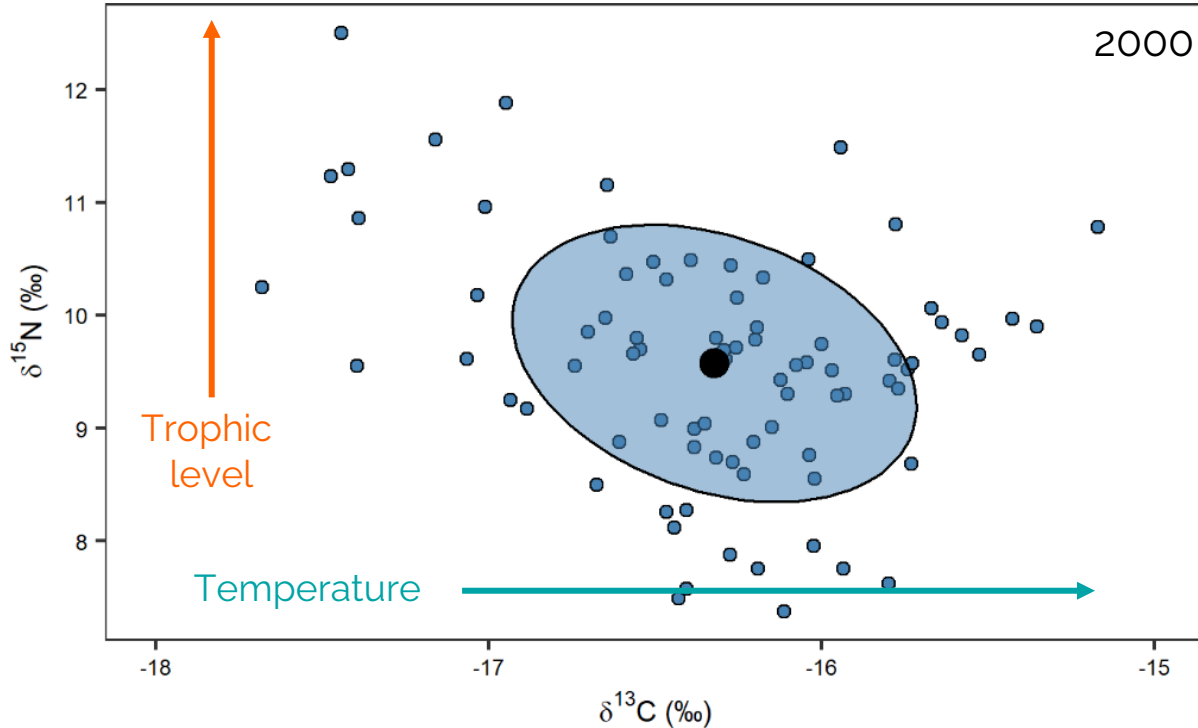

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales  
Nevoux *et al.* / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

## Change in marine feeding conditions

Tracking salmon isotopic niche in the ocean

Analysis of the isotopic composition of scales

- Nitrogen ( $\delta^{15}N$ ): a proxy of trophic level
- Carbon ( $\delta^{13}C$ ): a proxy of source and temperature

INRAE

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales

Nevoux et al. / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

## Change in marine feeding conditions

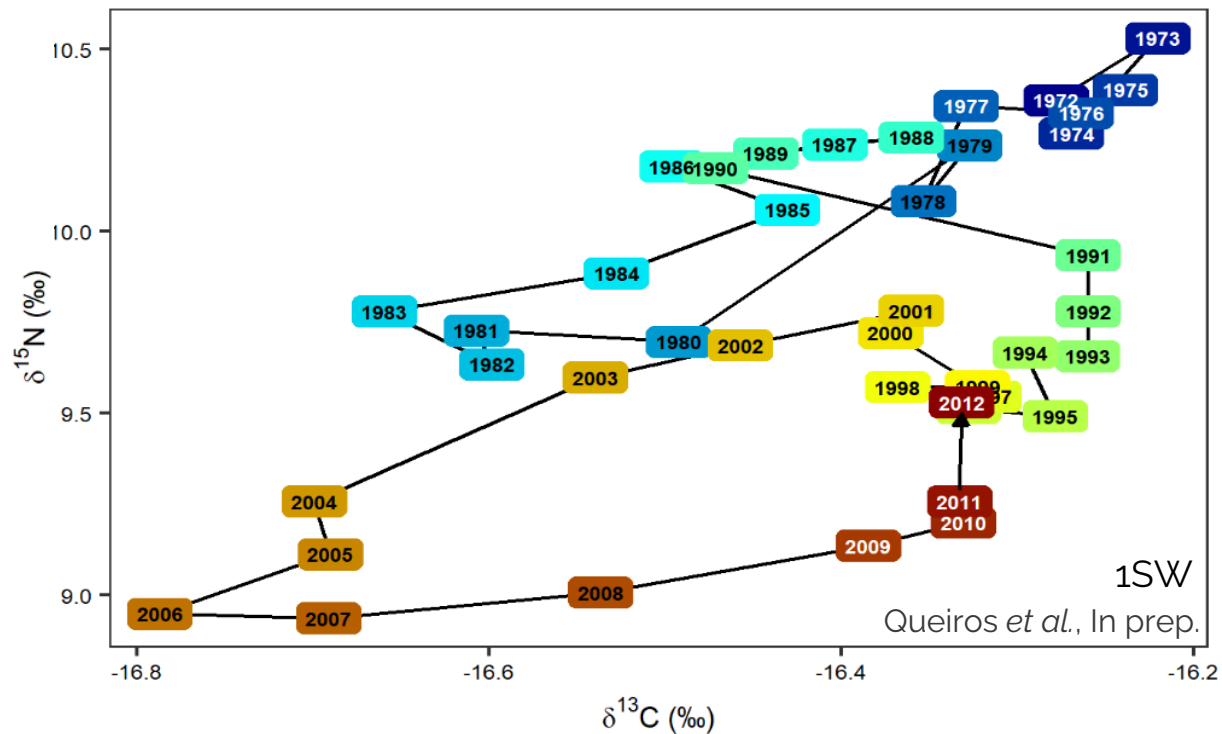

Tracking salmon isotopic niche in the ocean

Analysis of the isotopic composition of scales

- Nitrogen ( $\delta^{15}\text{N}$ ): a proxy of trophic level
- Carbon ( $\delta^{13}\text{C}$ ): a proxy of source and temperature

→ Different diet on the same feeding ground?

→ Same diet on a different feeding ground?

INRAE

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales

Nevoux et al. / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

## ➤ What about later marine growth?

Contrasted signals in growth patterns

Increasing trend in winter growth at sea  
High variability in growth trajectories...

**INRAE**

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales

Nevoux *et al.* / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

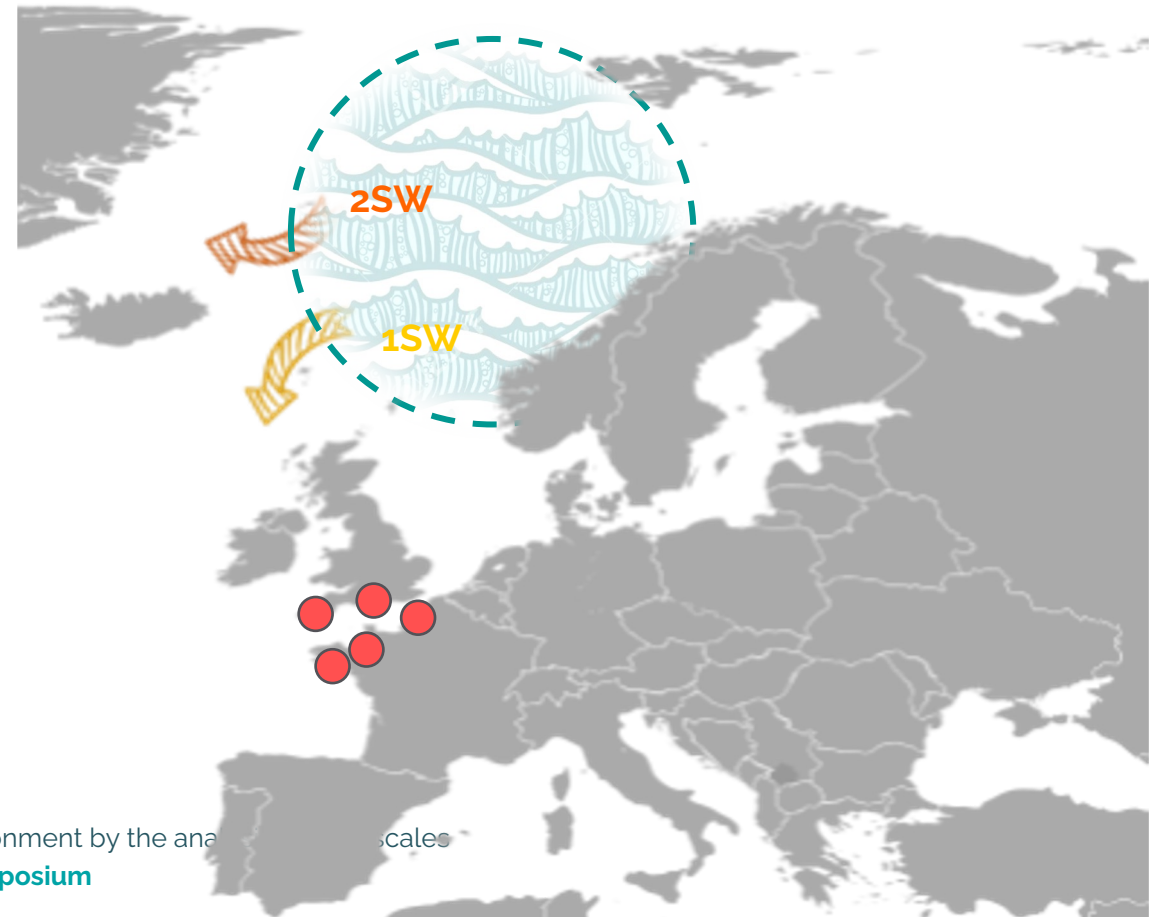

# ➤ What about later marine growth?

Contrasted signals in growth patterns

Increasing trend in winter growth at sea  
High variability in growth trajectories...

Asynchrony in 1SW and 2SW: different locations  
→ Seasonal contrast in response to oceanic changes

**INRAE**

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the ana... scales  
Nevoux *et al.* / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

## ➤ What about later marine growth?

Contrasted signals in growth patterns

Variability in later marine growth to explore

→ Link with trends in North American populations?

INRAE Barajas et al. 2021

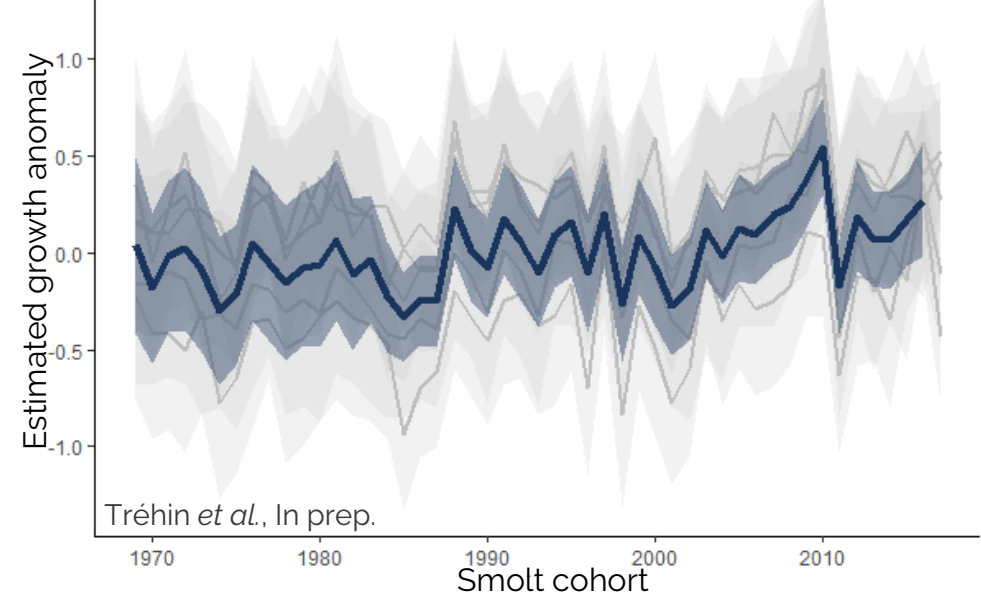

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales

Nevoux et al. / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

Growth increment – second summer at sea

Growth increment – second winter at sea

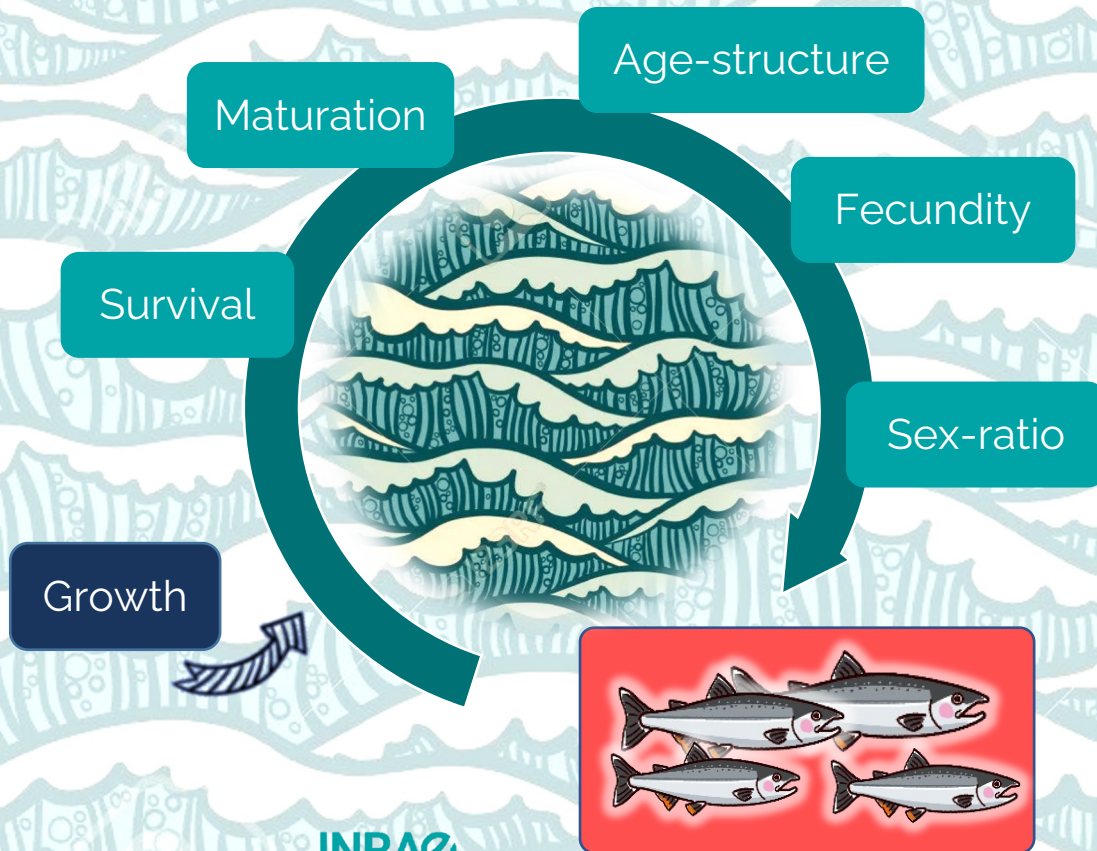

## ➤ A life cycle approach of salmon life at sea

Cascading effects of change in growth on salmon life history

Account for variability in demographic transitions  
in response to a rapidly changing environment

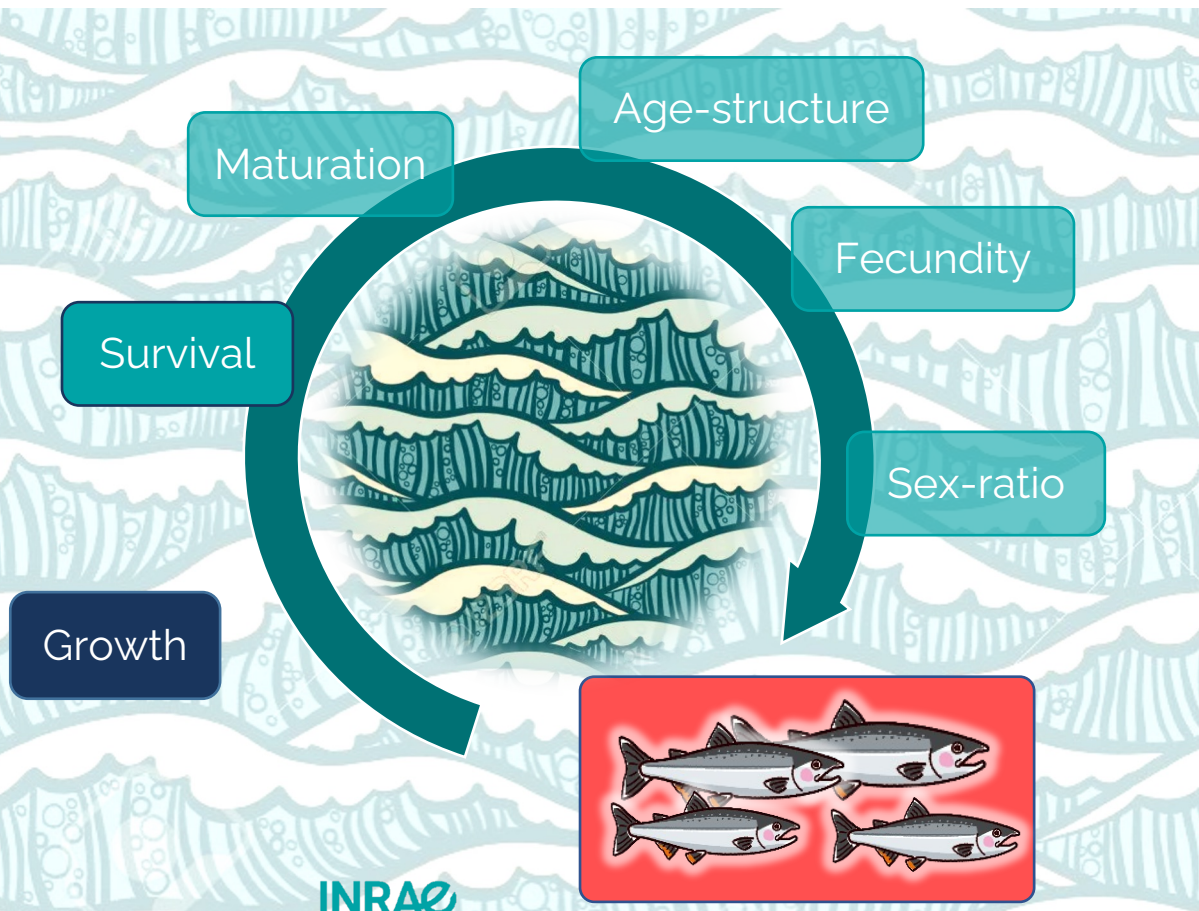

**INRAE**

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales  
Nevoux et al. / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

# ➤ A life cycle approach of salmon life at sea

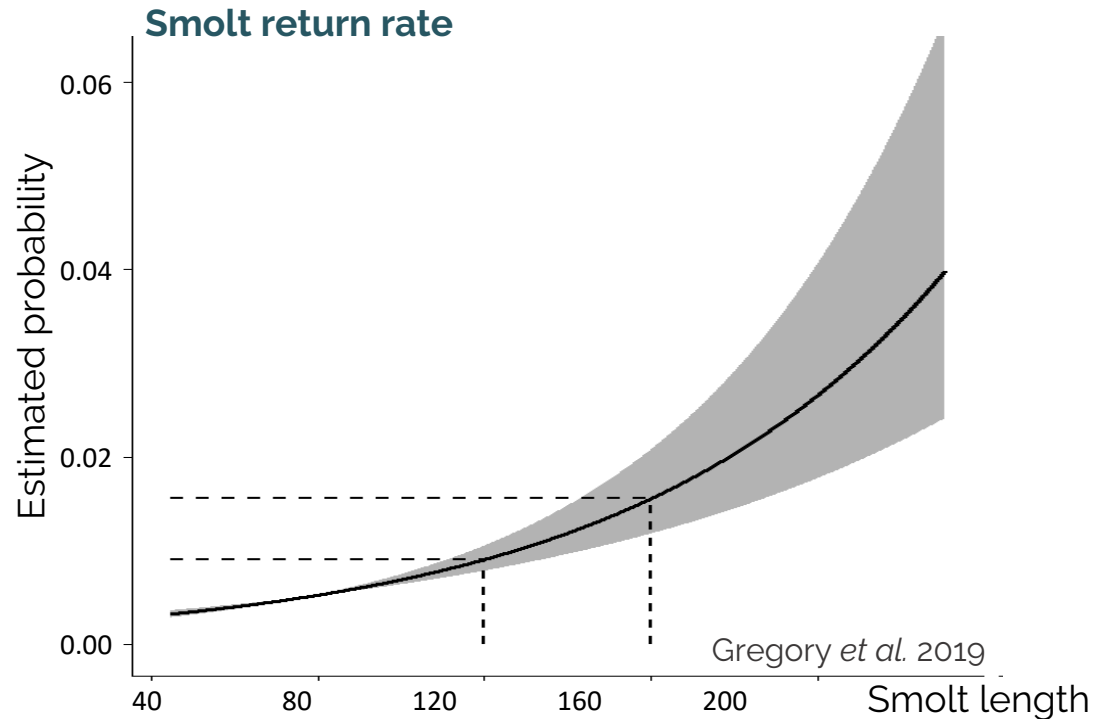

Cascading effects of change in growth on salmon life history

Account for variability in demographic transitions in response to a rapidly changing environment

INRAE

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales  
Nevoux et al. / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

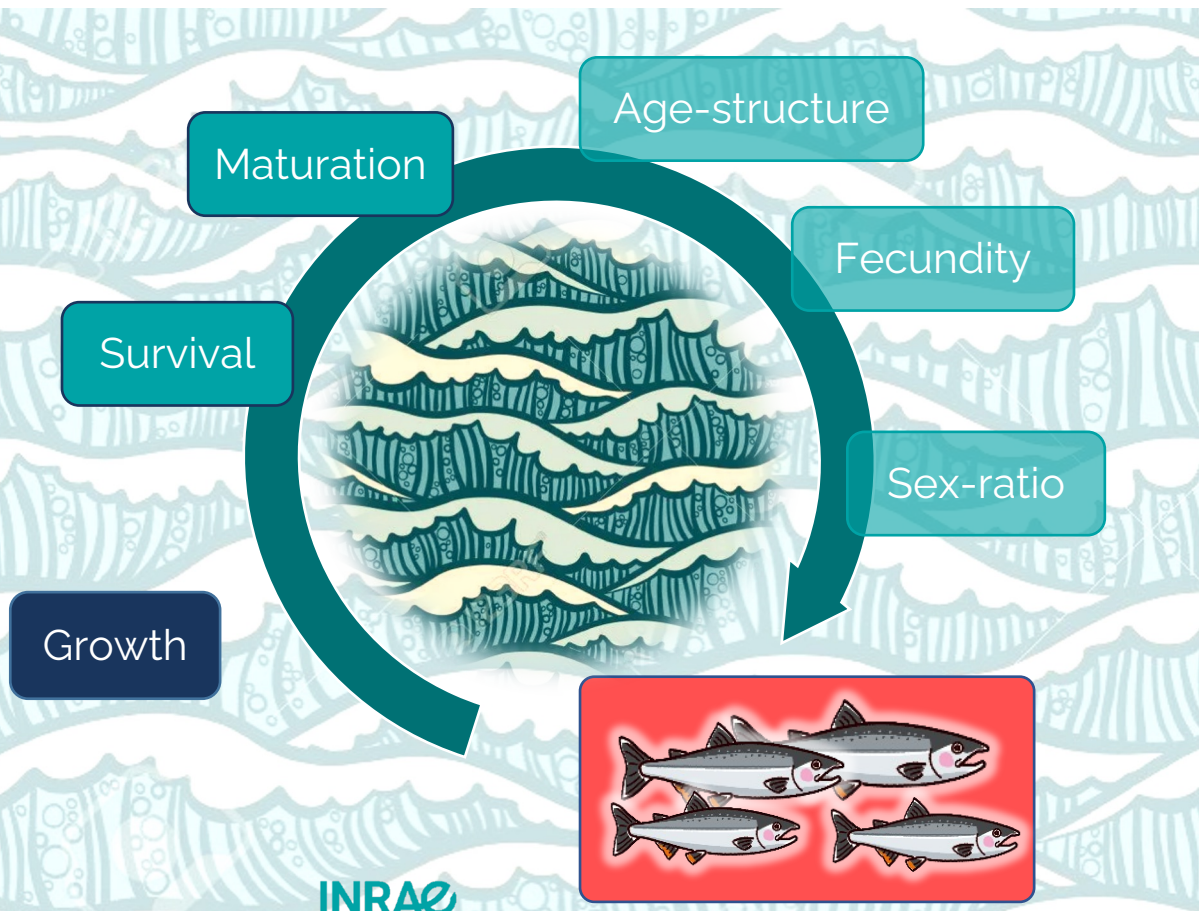

Larger smolts survive better at sea  
→ Carry-over effect of freshwater growth

# > A life cycle approach of salmon life at sea

Cascading effects of change in growth on salmon life history

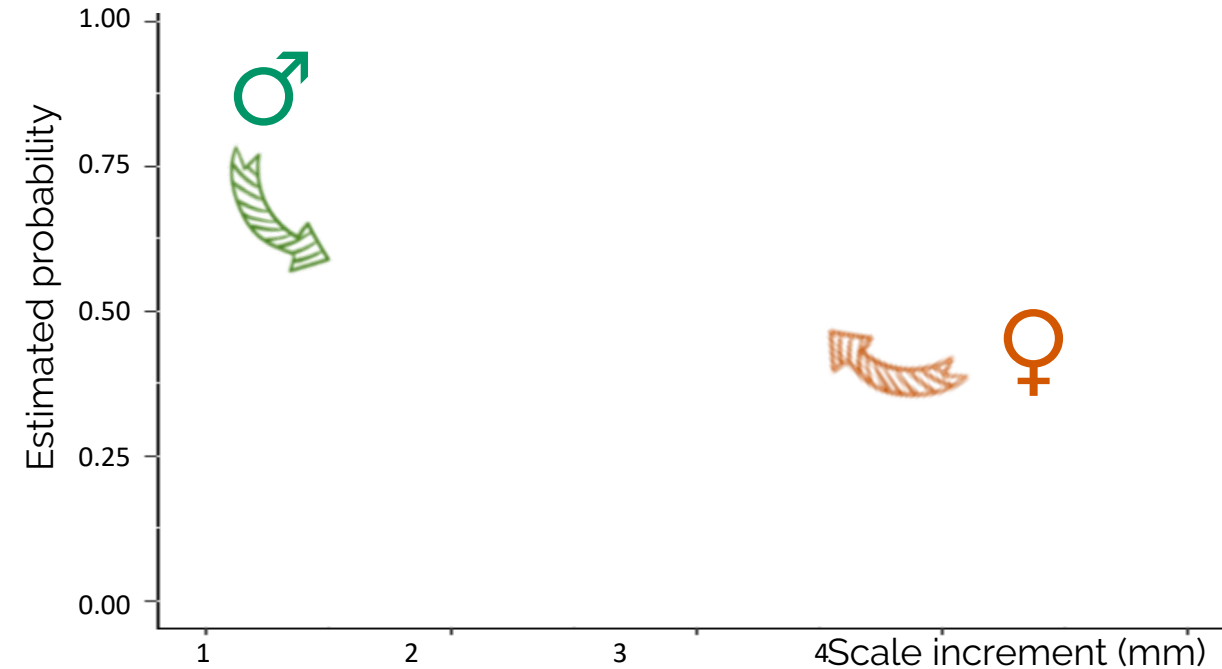

Account for variability in demographic transitions in response to a rapidly changing environment

INRAE

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales  
Nevoux et al. / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

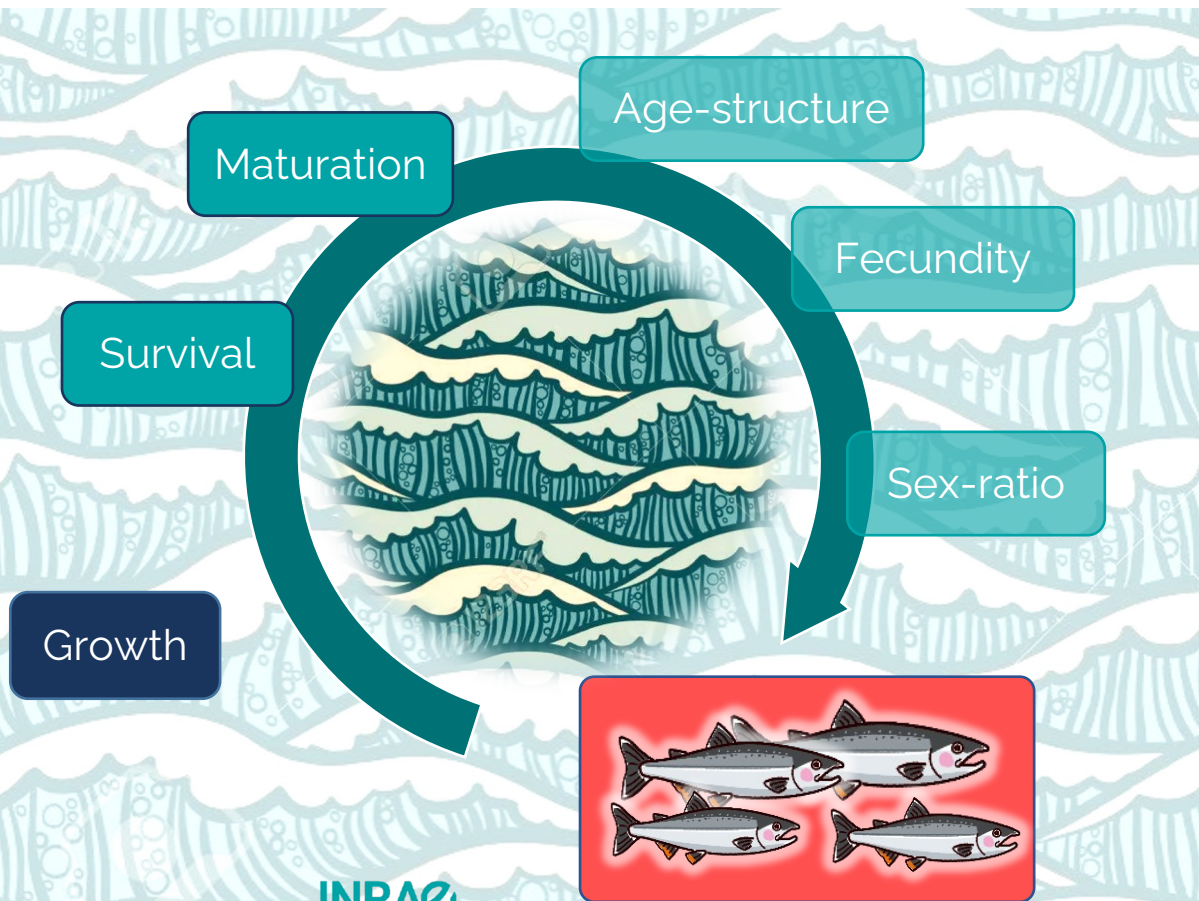

Probability to mature and return after 1SW

# ➤ A life cycle approach of salmon life at sea

Cascading effects of change in growth on salmon life history

Account for variability in demographic transitions in response to a rapidly changing environment

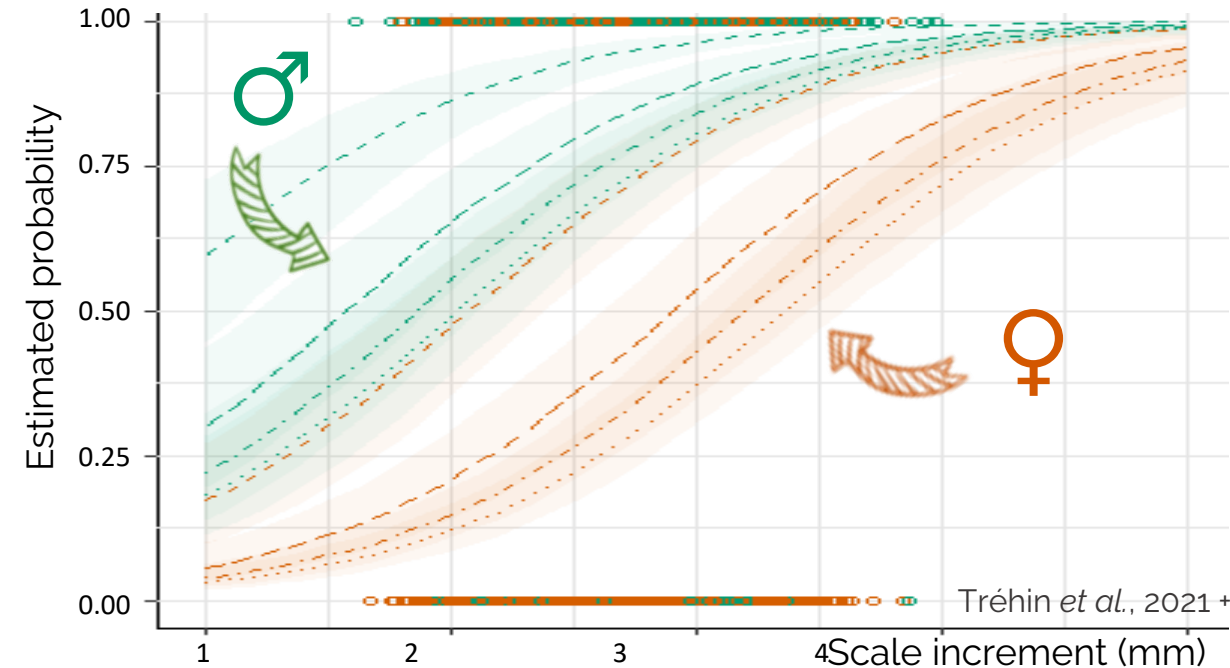

INRAE

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales

Nevoux et al. / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

Probability to mature and return after 1SW

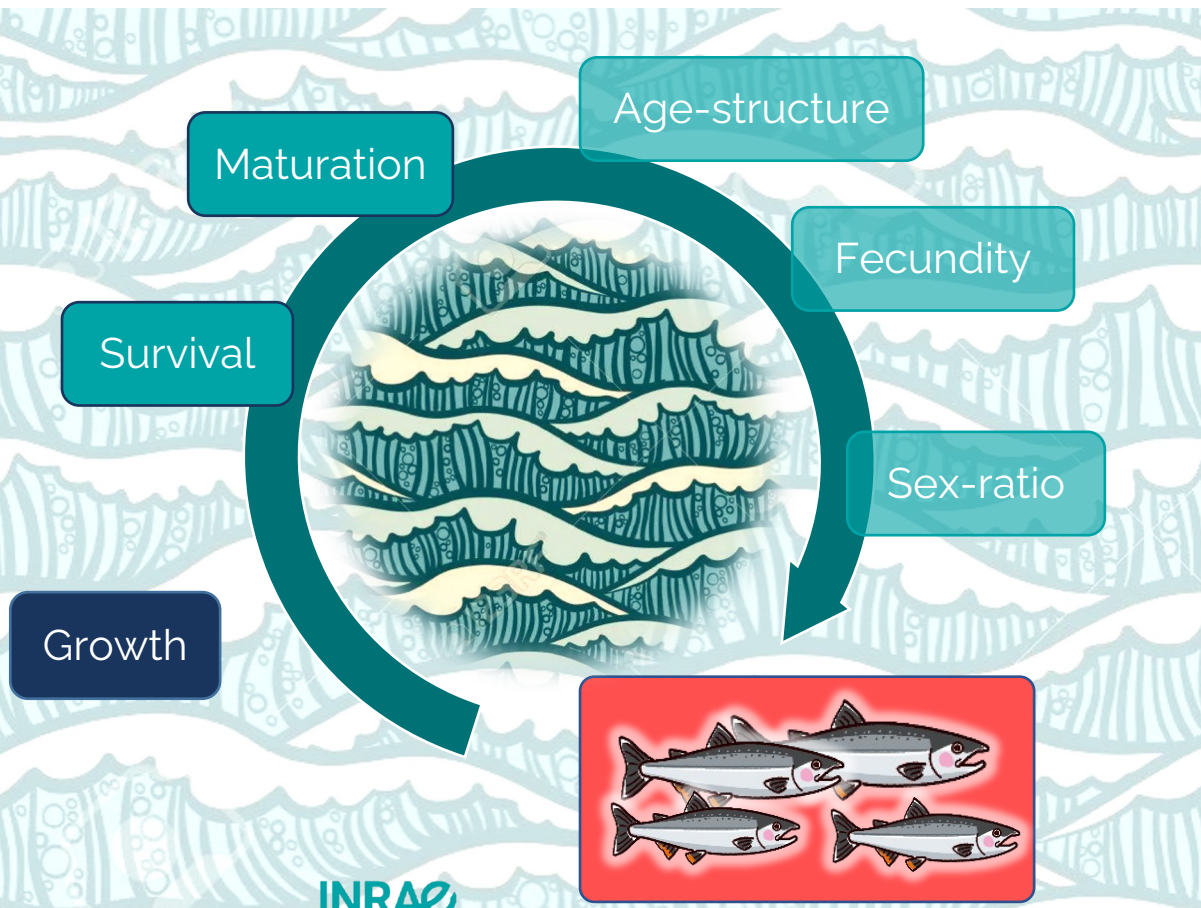

- ➔ Size at the end of summer drives maturation decision
- Post-smolt growth is similar in females and males
- Males mature at a smaller size than females

# ➤ A life cycle approach of salmon life at sea

Cascading effects of change in growth on salmon life history

Account for variability in demographic transitions in response to a rapidly changing environment

INRAE

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales

Nevoux et al. / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

### Probability to mature and return after 1SW

Effect of decrease in early marine growth:

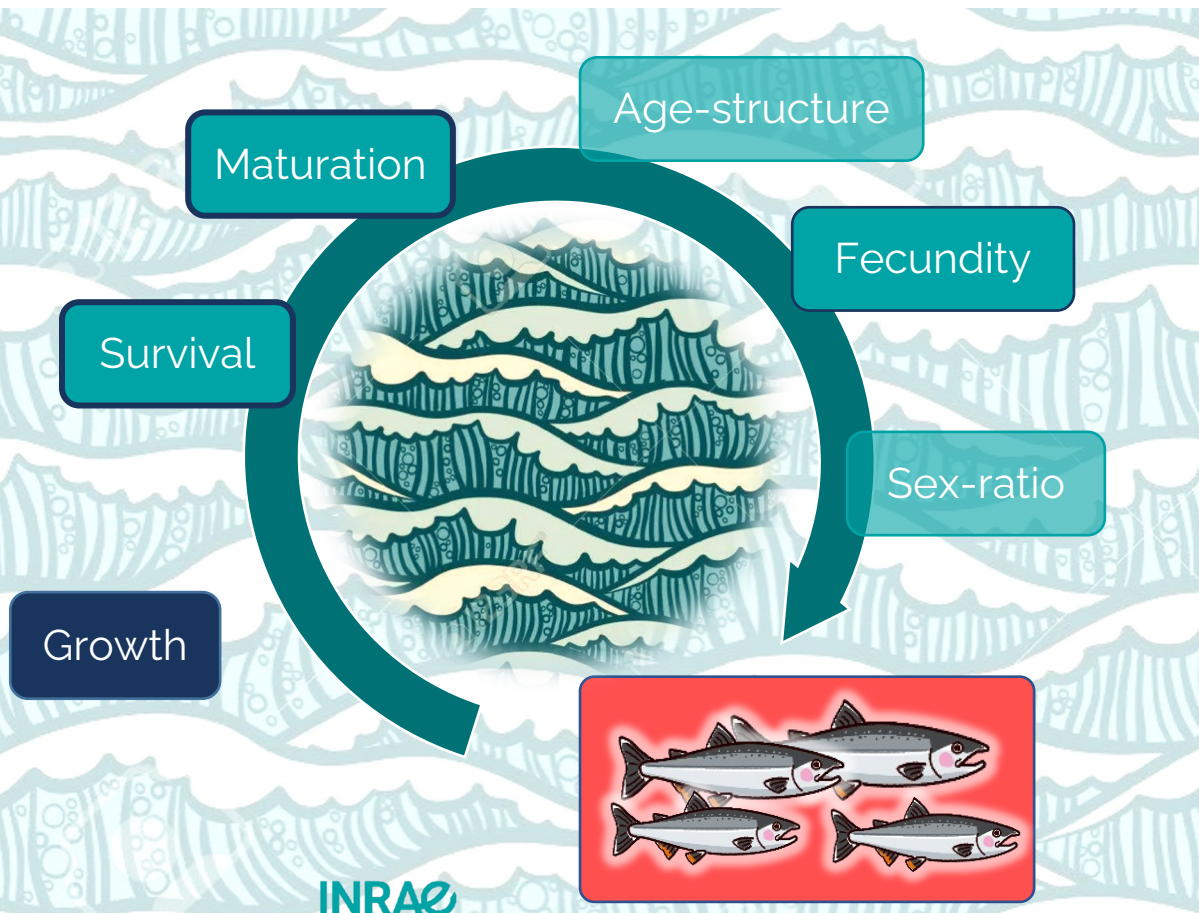

- ➔ Decrease in probability to mature at 1SW
- ➔ Difference in the response between rivers

# ➤ A life cycle approach of salmon life at sea

Cascading effects of change in growth on salmon life history

Account for variability in demographic transitions in response to a rapidly changing environment

INRAE

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales  
Nevoux et al. / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

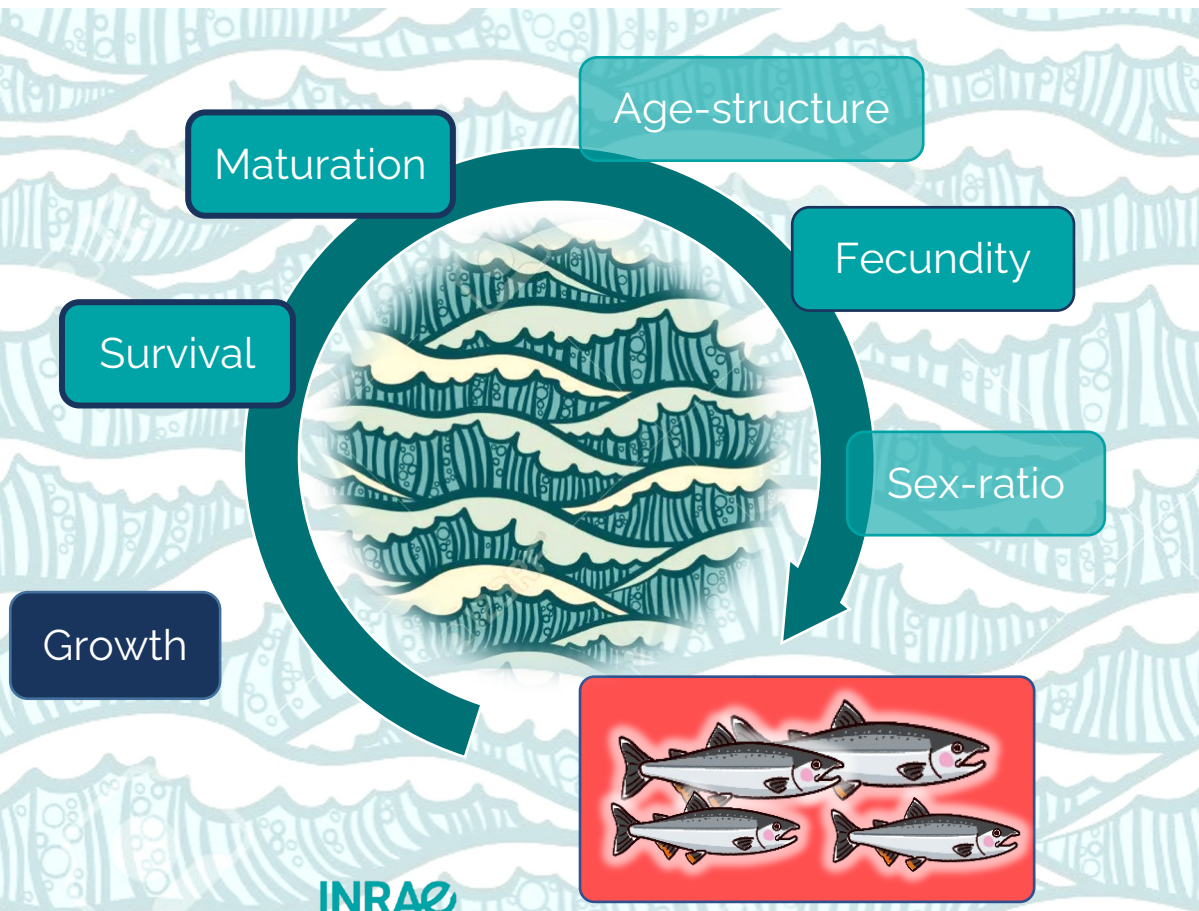

### Fecundity – Rivers Scorff and Bresle

# ➤ A life cycle approach of salmon life at sea

Cascading effects of change in growth on salmon life history

Account for variability in demographic transitions in response to a rapidly changing environment

### Fecundity – Rivers Scorff and Bresle

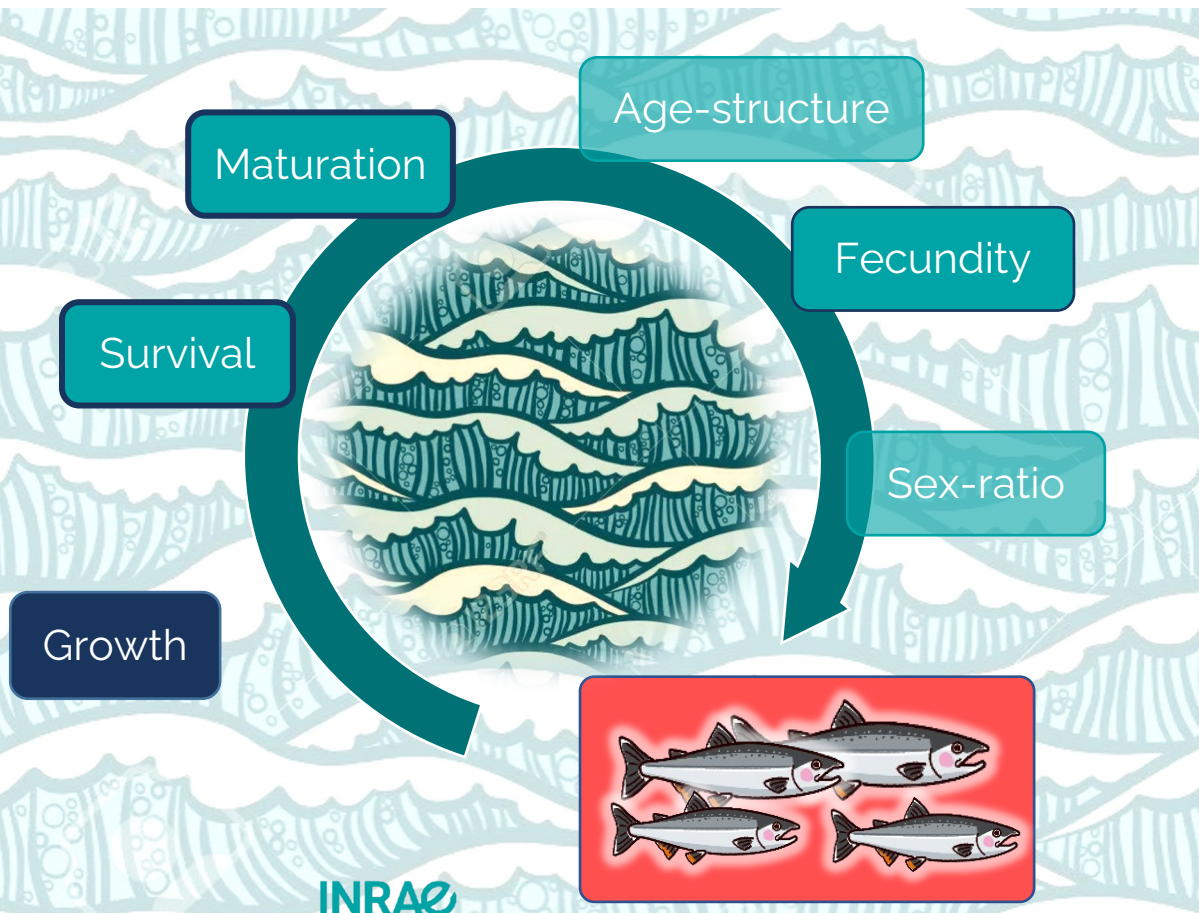

Decrease in growth leads to decrease in fecundity  
Response specific to each population

# ➤ A life cycle approach of salmon life at sea

Cascading effects of change in growth on salmon life history

Account for variability in demographic transitions in response to a rapidly changing environment

INRAE

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales

Nevoux et al. / 4-6 October 2022 / International Year of the Salmon Synthesis Symposium

### Fecundity – Rivers Scorff and Bresle

Decrease in growth leads to decrease in fecundity  
Response specific to each population  
Deviation from references used in management  
→ Non-stationarity in salmon population dynamics

## ➤ Conclusion

Can scales open the black box of salmon life at sea?

### **Retrospective analysis of marine growth from salmon scales**

Scales as a tool to track individual growth trajectories in a changing environment

→ Investigate change at different spatial and temporal scales

### **Compare salmon growth across the Atlantic Ocean**

Many labs analyze growth on scales BUT metrics are not easily comparable yet

→ Opportunity for collaboration and harmonization of approaches

### **Replace growth at the center of salmon life history**

Carry-over effect of freshwater life into marine life – and back!

Non-stationarity in ecological mechanisms

→ A life cycle approach is relevant for ecology and management

**INRAE**

Unraveling the demographic response of Atlantic salmon to a rapidly changing environment by the analysis of their scales
